Addendum #2
BID #6621F 2018 Extruded Concrete Curbing

Bonding Agent:

The bonding agent shall be Sika Latex, Laricrete 40, Concsresive Paste LPL, or approved equal.

CONSTRUCTION METHODS

The Contractor shall visit each location selected by the Engineer to receive extruded concrete curb prior to the installation date to review the locations. If a replacement of damaged extruded concrete curb is required, the existing extruded concrete curb shall be removed by mechanical means and disposed by the Contractor.

The Contractor shall thoroughly clean all of the surfaces where the extruded concrete curb is proposed with a broom, sweeping equipment, or if necessary a power washer.

The extruded concrete curb shall only be installed when rain is not forecasted and the outside temperature is 45 degrees Fahrenheit and rising.

The extruded concrete curb shall be bonded to the existing pavement with an adhesive approved by the Engineer.

The top of the finished curb must be true and to line as preapproved by the Engineer. The curb will follow the contour of the adjacent pavement and be free of humps and sags. Control joints shall be cut immediately through on third of the cross section of the fresh extruded concrete curb. The joint shall be tooled and finished to a neat and uniform appearance. The control joint shall be installed at nine foot intervals and more often on a curve to minimize shrinkage cracking.

The finished curb shall be coated with a curing compound, which has been designed to seal the surface and form a waterproof membrane to retard the loss of water from the fresh concrete. The curing compound shall be applied immediately or up to 2 hours after the extruded concrete curb is installed. The curing compound can only be applied when rain is not forecasted within 4 hours.

The Contractor shall supply cones as directed by the Engineer to protect the curb from vehicles for a minimum of 2 days after the extruded concrete curb installation.
